ANOTHER SAUCER SEEN, AND ONE IS 'EXPLODED'

LOS ANGELES, July 6 (AP)—William Grant, 26 years old, a former Marine Corps aerial photographer, today reported seeing a brilliantly lighted circular object in the sky last midnight.

He estimated the object was 50 feet in circumference and when first seen was about 1,000 feet overhead. Its speed at first was about 100 miles an hour, then increased to about 500 miles an hour before disappearing behind the Hollywood hills, he said.

"It was in sight about 45 seconds," Mr. Grant said. "It left no exhaust trail and made no sound."

His story was confirmed by a friend, Gilbert Magill, 35, president of a concern conducting research with helicopters. Mr. Grant, who lives in Glendale, was visiting the home of a friend in Hollywood. He said he was standing in the patio when he saw the object.

WASHINGTON, July 6 (UP)—The Air Force was confronted today with a new twist to the two-year-old flying saucer mystery—saucers launched from planes—but its answer was the same.

Officials said John Keller, a farmer of Dowagiac, Mich., must have been mistaken when he said he saw an Air Force C-54 launch a flying saucer over his hayfield last week.

What he probably saw, they said, was a piece of cowling that came loose from one of the big four-engine transports.
